## Education

**Vishnu Institute of Technology** 2021 - 2025
*Bachelor of Technology in Computer Science and Engineering (GPA: 9.02 / 10)* *Bhimavaram, Andhra Pradesh*

**Vishnu Institute of Technology** 2022 - 2025
*Honors in Computer Science and Engineering (GPA: 8.4 / 10)* *Bhimavaram, Andhra Pradesh*

**Jawahar Navodaya Vidyala** 2021
*12th, MPC (Percentage: 86)* *Pedavegi, Andhra Pradesh*

**Jawahar Navodaya Vidyala** 2019
*10th (Percentage: 76)* *Pedavegi, Andhra Pradesh*

## Experience

**Quadric Information Technology Private Limited** March 2026 – Present
*Forward Deployed Engineer* *Hyderabad, Telangana*

- Tendorix AI: Co-engineered an enterprise SaaS platform automating RFP analysis and proposal writing via RAG, including an AI Compliance Engine. Built a pgvector hybrid search & LLM matching system (Claude/GPT-4o) with an adversarial auditor loop reducing hallucinations. Document Ingestion: Developed layout-preserving PDF/DOCX/XLSX parsers with PyMuPDF/pdfplumber table recovery & Azure Document Intelligence. Collaborative App: Implemented a Next.js 14/FastAPI frontend with a TipTap-based rich text editor, version diffing, and SharePoint/Google Drive sync. Tech Stack: Next.js 14, FastAPI, pgvector, Redis, Claude API.
- Developed ConQit, an enterprise-grade event management platform built as a Progressive Web Application (PWA) delivering a seamless experience across iOS, Android, and web. Engineered a scalable multi-tenant architecture where each event is provisioned as an independent application with complete data isolation, enabling organizations to securely manage multiple events from a single platform. Built a robust administration portal supporting extensive customization of event sessions, attendee experiences, branding, and workflows, while implementing Single Sign-On (SSO) integration and deploying the platform on a secure private AWS infrastructure to ensure scalability, reliability, and enterprise-grade security.

**Quadric Information Technology Private Limited** January 2025 – March 2026
*Full Stack Developer* *Hyderabad, Telangana*

- Developed and maintained US OBU Calendar for AstraZeneca, a custom SharePoint application leveraging React, SPFx, and SharePoint Lists as the database, enhancing team collaboration and scheduling efficiency.
- Contributed as a Software Developer to an AI-driven project for a Telangana government department, while also designing and developing a prototype for an AI full-stack solution in the judicial sector.
- Building Hack2Build, Quadric IT's internal Hackathon management platform, to streamline event coordination and innovation tracking.
- Designed and delivered an enterprise-scale Conference Management Application for AstraZeneca, owning full-stack development, Microsoft Azure AD SSO, and complete AWS infrastructure provisioning using Lambda, API Gateway, KMS, RDS Proxy, and Aurora PostgreSQL.

**Quadric Information Technology Private Limited** June 2024 – September 2024
*Full Stack Developer – Intern* *Hyderabad, Telangana*

- Worked on CloFast, an AI-powered platform leveraging Natural Language Processing (NLP) and Generative AI to perform data reconciliation and automate enterprise workflows across domains such as finance.
- Gained in-depth knowledge of integrating Artificial Intelligence with accounting principles, leveraging SAP and financial domain insights to understand how AI-driven automation can enhance accuracy and efficiency in business operations.

## Professional Projects

**Tendorix AI – Tender & Bid Proposal Platform** July 2026 – Present
*Next.js, TypeScript, Tailwind CSS, FastAPI, PostgreSQL, Anthropic Claude AI, Azure Communication Services, LLM Gateway, Azure Container Apps, Document Intelligence, Redis, Docker, Container Registry*

- **Role: Full-Stack Developer & AI Integration Engineer** — Architected and developed an enterprise AI-powered platform that automates tender analysis and proposal generation, reducing bid preparation time from weeks to hours.
- Implemented a **document intelligence pipeline** using vision-based OCR and semantic chunking to extract structured requirements, timelines, buyer references, and other critical information from tender documents.
- Built a **4-phase AI-powered proposal generation workflow** (Understand → Plan → Draft → Finalize) using Anthropic Claude (Haiku & Sonnet) to generate comprehensive, evidence-backed proposals with prompt caching and intelligent model selection for cost optimization.
- Developed a **smart capability-matching engine** using semantic similarity and LLM-based evaluation to score organizational capabilities against tender requirements and support real-time bid qualification.
- Built **context-aware AI chat interfaces** for company profiles and previous bids, enabling users to query documents, retrieve relevant information, and extract insights without manual document review.
- Developed a **custom Model Context Protocol (MCP) server** enabling Claude to securely access and interact with Tendorix project data, proposals, requirements, and search capabilities, extending AI assistance directly into the user's workflow.
- Designed a **scalable FastAPI backend** using SQLAlchemy 2.0 async ORM, Alembic migrations, RBAC, and an abstracted LLM Gateway supporting multiple AI providers with token caching and cost tracking; integrated Azure Communication Services for transactional email notifications and secure domain authentication.

**Conference Application – AstraZeneca** | December 2025 – April 2026

*React, AWS Lambda, AWS Aurora (PostgreSQL), AWS API Gateway, Azure AD*

- **Role: Full-Stack Developer & AWS Infrastructure Engineer** — Designed and developed an enterprise-grade conference management application with role-based access control for Admin and Attendee users.
- Implemented Admin functionality to perform full CRUD operations on events and master data, including departments and session types, while enabling Attendees to browse events, attend sessions, and manage favorite sessions.
- Developed comprehensive event modules containing event metadata, session details, department mapping, venue maps, location URLs, and user profile management.
- Integrated Microsoft Single Sign-On (SSO) using Azure Active Directory to provide secure authentication and seamless user onboarding.
- Architected and developed a scalable, serverless backend using AWS Lambda and Amazon Aurora (PostgreSQL), ensuring high availability, security, and performance.
- **Configured the complete AWS infrastructure from scratch** including CloudFront, S3, API Gateway, Lambda, VPC, AWS Secrets Manager, AWS Key Management Service (KMS), and Aurora PostgreSQL.

**Hack2Build – Custom Hackathon Management Platform** |

*React, Node.js, Express, MongoDB, Azure, Docker, GitHub Actions* September 2025 – January 2026

- **Role: Project Lead** - Led the end-to-end development of a customized hackathon management platform, overseeing architecture, UI/UX, and key functionality.
- Developed **user, profile, event, and submission management** with role-based access for Participants, Organizers, Reviewers, and Admins, supporting multi-stage workflows, reviewer assignment, automated scoring, and leaderboards.
- Built a **reviewer feedback and evaluation system** with ratings and feedback aggregation, along with automated email notifications for registrations, submissions, deadlines, and reviewer tasks.
- Integrated **AI-driven NLP workflows** for automated hackathon creation, resume data extraction and profile generation, and personalized hackathon recommendations based on user skills and preferences.
- Built a **responsive and interactive UI/UX** using React, Framer Motion, and Lottie, and deployed a modular, scalable architecture on **Azure App Service** with Blob Storage, Docker, and GitHub Actions for CI/CD.

**US OBU Planning Calendar Application – AstraZeneca** | June 2025 – August 2025

*React, SPFx, SharePoint Lists*

- **Role: Team Leader & Developer** — Developed a robust enterprise-grade business planning calendar for AstraZeneca, supporting multiple business units, categories, and teams.
- Implemented multiple calendar views (monthly, quarterly, yearly, list, single-day, multi-day) with event bar overlays, time zone handling, and role-based access control for viewers, organizers, and admins.
- Integrated Microsoft Single Sign-On using Active Directory to fetch user data and access levels automatically.
- Designed a workflow for event approval, separating approved and unapproved events, with automated email notifications for creation, updates, approvals, and declines.
- Added enterprise-grade features including robust filtering, search, and export options (PDF, Excel, CSV), with full tracking of created/updated by and timestamps.
- Bundled the solution into a custom SPFx package and deployed on SharePoint, enabling seamless organizational adoption.

## MVPs

**Nibandhana – AI-Powered Legal Document Translation** | July 2025
*MERN, AWS, Docker, GitHub Actions, CI/CD*

- **Role: Developer** — Built an AI platform to translate Telangana Secretariat legal documents from English to Telugu with legal accuracy.
- Integrated **Google Gemini AI** for high-precision contextual translation and professional handling of confidential government data.
- Implemented using MERN stack, deployed on AWS (EC2, S3, Route 53), containerized with Docker, and automated via GitHub Actions CI/CD.

**CloFast – AI-Powered Reconciliation Platform** | June 2024 – June 2025
*React, Node.js, AWS (Textract, Bedrock), Google Gemini AI, MongoDB*

- **Role: Full Stack Developer** — Developed an intelligent, enterprise-grade reconciliation platform that automates complex multi-way financial reconciliations using AI and NLP.
- Integrated **AWS Textract** and **Google Gemini AI** for document processing and NLP-based data extraction from unstructured financial statements.
- Implemented **AI-powered matching and discrepancy detection** using **AWS Bedrock (Claude 3.5 Sonnet)**, enabling multi-way (2-way, 3-way, n-way) reconciliations.
- Designed modular components for **workspace management, profile-based configuration, and task collaboration** with role-based access control.
- Built an **interactive reconciliation dashboard** with real-time status tracking, smart insights, and AI-generated recommendations for unresolved transactions.
- Achieved significant improvements in accuracy, scalability, and automation—reducing manual effort by over 90% in financial reconciliation workflows.

**Anusan – AI-Powered Judicial Document Translation** | March 2025
*MERN, AWS, Docker, GitHub Actions, CI/CD*

- **Role: Developer** — Developed an AI platform to translate Telangana High Court judgments from English to Telugu and generate accurate headnotes.
- Ensured confidentiality and legal compliance for sensitive judicial documents using **Google Gemini AI**.
- Implemented using MERN stack, deployed on AWS, containerized with Docker, and automated builds/tests with GitHub Actions CI/CD.

## Personal Projects

**Expiry Tracker** | *Azure, React Native Expo, Express.js, Node.js, MongoDB* December 2024 – March 2025

- **Project Lead & Developer** — Led the project and developed a mobile app for automated product expiry tracking using barcode scanning and AI-powered text extraction, providing timely notifications to users.
- Integrated Azure AI, web scraping, and price comparison across platforms (Amazon, Flipkart, MedPlus, Apollo Pharmacy, etc) with Google login authentication.
- Implemented multilingual support, text-to-audio conversion, fake product detection, and a fully automated workflow requiring no manual entry.
- Built a robust user management system including profile updates, password management, user stats, and password recovery.

**StudyEasy** | *MERN, Vercel* February 2024 – April 2024

- **Role: Team Lead & Developer** — Led the project and developed a centralized study resource platform aimed at minimizing distractions and enhancing learning efficiency, deployed online for seamless access.
- Implemented role-based access for Admins and Learners, with course and content management, interactive dashboards, and profile management features.
- Integrated Gemini API for chatbot assistance and ensured secure authentication using JWT along with OTP-based password recovery.

## Technical Skills

**Programming Languages**: Java, Python, JavaScript

**Databases**: MySQL, MongoDB, PostgreSQL, Firebase

**Version Control**: Git, GitHub

**Web Technologies**: HTML, CSS, JavaScript, React.js, Node.js, Express.js, React Native

**Operating Systems**: Windows, Linux

**Design Tools**: Figma, Canva

**Development Tools**: VS Code, Google Colab, WordPress

**Applied AI**: RAG, Generative AI, NLP, LLM Integration, Prompt Engineering, AI Document Processing

**Cloud & DevOps**: AWS Console, VPC, Private subnets, S3, EC2, Route 53, Azure Blob Storage, Azure App Service, Azure containers, DNS, Docker, CI/CD, GitHub Actions

## Certificates

| | |
|---|---|
| React Basics Certificate — Meta | October 2023 |
| Advanced React Certificate — Meta | December 2023 |
| Full Stack Web Development Certificate — Codinza powered by StudyOwl | December 2023 |
| Natural Language Processing Certificate — NPTEL | April 2023 |
| Cloud Foundations Certificate — AWS Academy | October 2023 |
| Machine Learning Foundations Certificate — AWS Academy | November 2023 |

## Activities

| | |
|---|---|
| Participated in the AWS AI Agent Hackathon with **Clofast – POS Reconciliation Case** | October 2025 |
| Participated in AWS DevOps Workshop | October 2024 |
| 2nd Prize in IoT Prototthon — VALIANT, VIT College Fest | December 2023 |
| Best Full Stack Project Award — Codinza powered by StudyOwl | November 2023 |
| 3rd Prize in TechnoGeek — Trance, SRKR Engineering College Fest | March 2023 |
| Participated in Smart India Hackathon — | 2022 & 2023 |
| GeeksForGeeks Institute Rank: Top 1% (12/3000) | |
| Solved 600+ problems on LeetCode & GeeksForGeeks | |
